Summary

Third-year Economic Informatics student with hands-on experience in data engineering, analytics, and backend development, interested in building practical technical solutions with business impact.

Experience

Intern, Product and Technology | July 2026 - August 2026

Chatham Financial - Internship

- Developed an interactive Streamlit application to monitor and analyze critical dates (lease expiry risks, renewal notices, break notices), helping stakeholders track key deadlines and time-sensitive portfolio information.
- Queried data in Snowflake using SQL and implemented data quality checks and validation rules using dbt Core, gaining hands-on exposure to data engineering, data analysis, and product development concepts.
- Used Git for version control and collaborated effectively within an agile team using Jira and Confluence for task tracking, organization, and technical documentation.

Back End Developer | November 2025 - Present

SiSC - Sindicatul Studenților din Cibernetică - Volunteer

- Developed scalable RESTful APIs and managed MySQL database interactions using Node.js, Express.js, and Sequelize.js, while collaborating via Git to ensure efficient version control and code integration.

Back End Developer | November 2025 - December 2025

Ideologiq - Internship

- Developed custom API endpoints via PHP plugins for a WordPress platform. Implemented GET and POST routes to handle data processing for features like forms and calendars, ensuring correct server-client integration.

Personal Projects

Uber Data Analysis (Python, Pandas, SQLite, SQL Querying)

- Executed a full-cycle data analysis project on an Uber dataset, utilizing Python (Pandas) for extensive cleaning, outlier handling (median imputation), and data validation. Wrote SQL queries against SQLite to extract key business insights, identifying peak hours, highest revenue payment methods (UPI), and vehicle type performance.

Data-Engineering-ETL-AWS (Python, Pandas, PostgreSQL, Docker, AWS RDS)

- Built an automated ETL pipeline that extracts JSON data from GitHub, processes it with Pandas, and loads it into an AWS RDS (PostgreSQL) instance. Containerized the entire application using Docker to ensure consistent environments across different machines.

Skills

- Soft Skills:** Problem-Solving, Critical Thinking, Adaptability, Detail-Oriented, Teamwork
- Programming Languages:** SQL, PL/SQL, C, C++, C#, JavaScript, Python, Java
- Libraries & Tools:** Express.js, Node.js, Sequelize.js, Snowflake, Streamlit, dbt Core, Git, Git Bash, GitHub, Oracle SQL, Pandas, Linux, API Integration, Jira, Confluence
- Languages:** Romanian, English

Education

B.Sc. Economic Informatics

ASE - Faculty of Cybernetics, Statistics and Economic Informatics, Bucharest | 2024–2027

Baccalaureate Diploma in Economics

Economic College "Mihail Kogălniceanu", Focșani | 2020-2024

Certifications

- Oracle Database Programming with SQL Pandas Kaggle course Intro to SQL Kaggle course Python Kaggle course
